Introduction

A rare egg has no value if its owner catches you before you reach the safe zone. In Steal an egg, speed determines which areas you can enter, how safely you can escape, and whether another player reaches an egg first. Back at your base, stolen eggs hatch into pets that generate money, including while you are offline. This **Steal an egg AFK Guide** connects those systems: choosing realistic routes, using the day-night reset, improving pets, and training speed without wasting time on an unreliable macro.

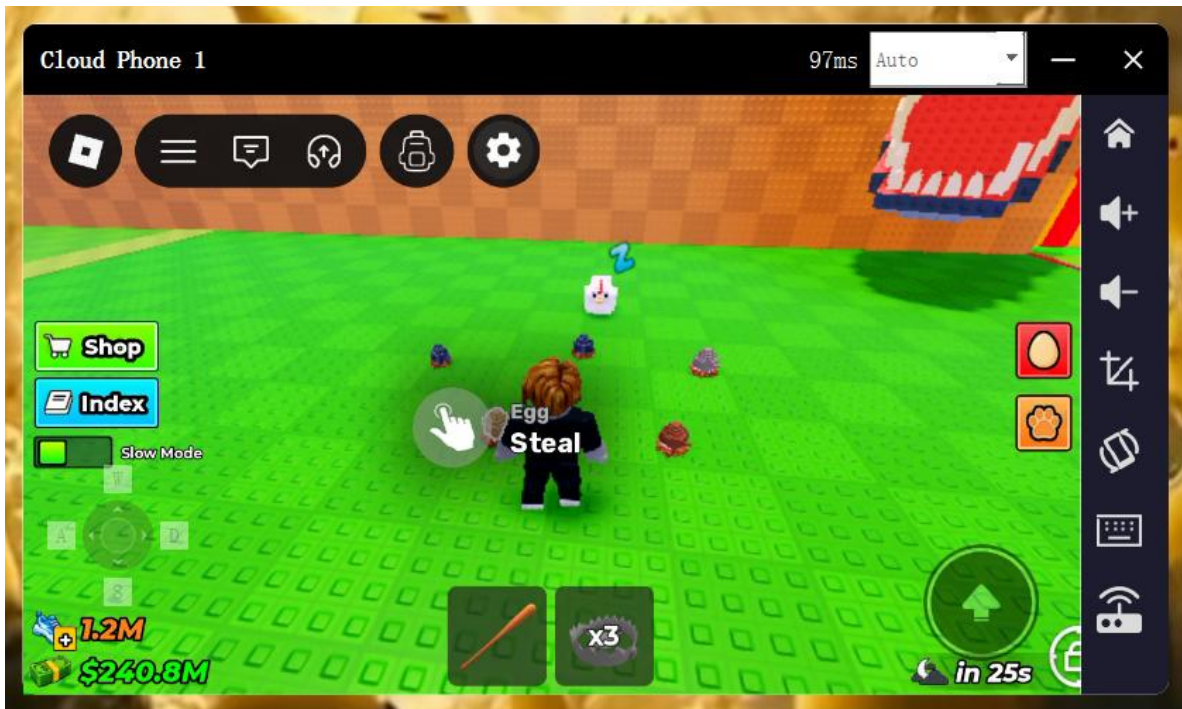

What Is Steal an egg?

The game is mainly PVE: eggs belong to NPCs, but players compete to reach them first. Better eggs usually appear farther from safety, and each zone shows a suggested speed. Treat that sign as a checkpoint, not a guarantee.

Steal an egg AFK Guide game overview

A successful theft starts beside the egg. Pick it up, turn toward the safe area, and keep the camera pointed along the return route.

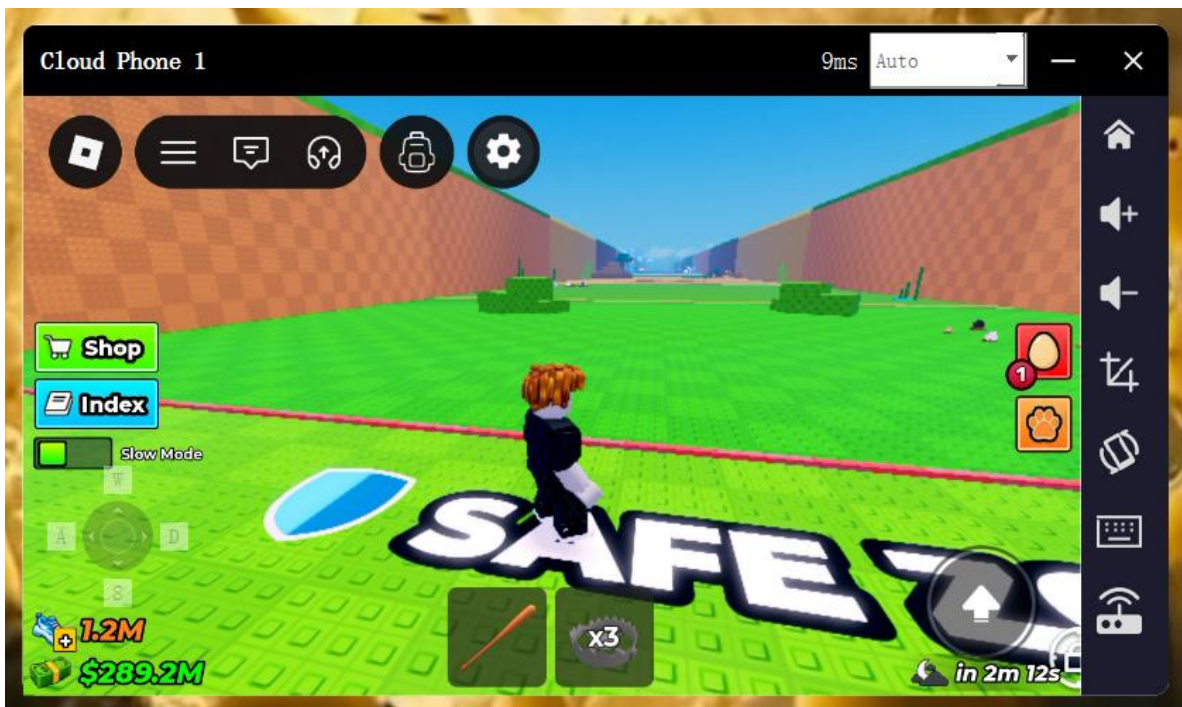

NPC egg ready to steal

If the owner catches you before the boundary, the theft fails.

Egg owner chasing the player

Farther zones offer stronger egg pools but leave less room for mistakes.

Distant egg zones and reward pools

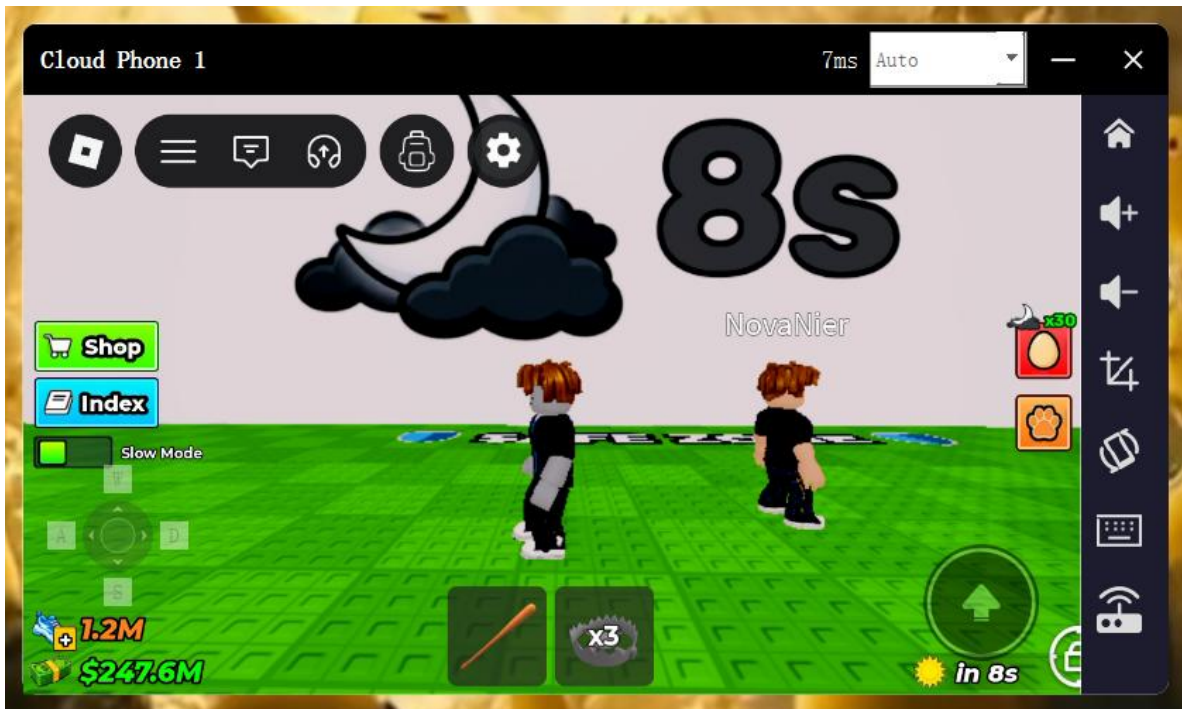

Use the zone marker to decide when your speed is ready.

Recommended speed sign at a zone

How the Day-Night Cycle Changes Your Route

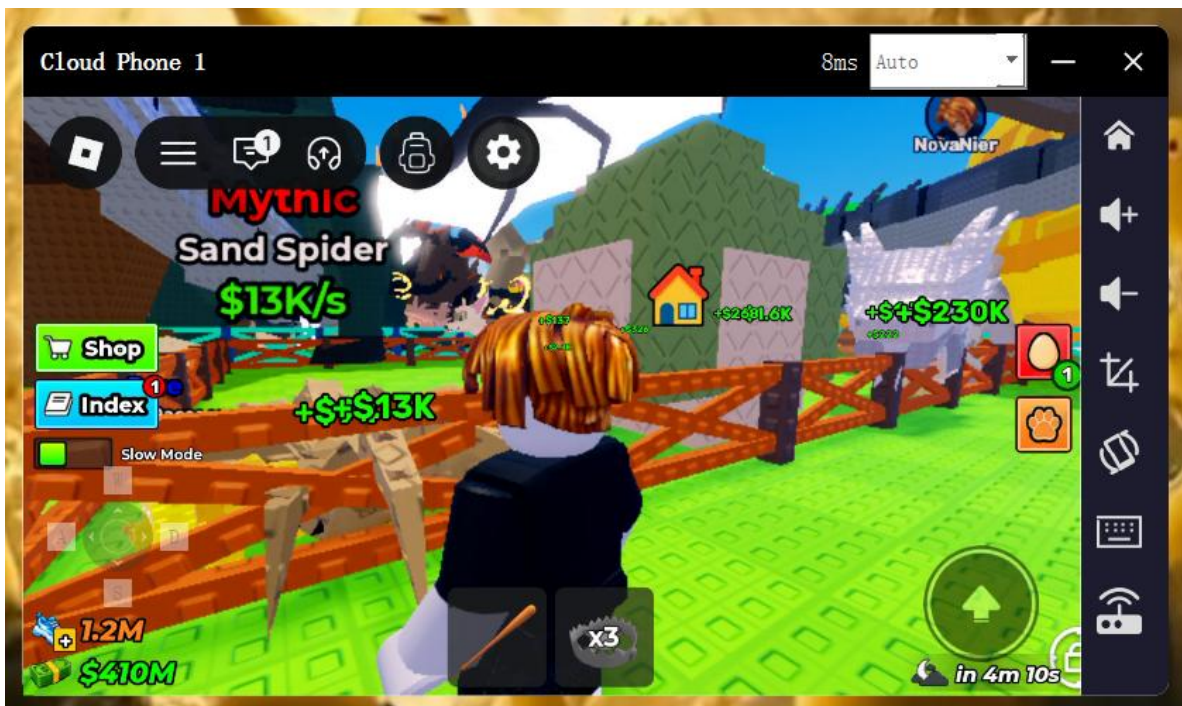

Day lasts about five minutes and night about ten seconds. Use daylight to steal. Night is a short reset window for egg pools. When a divine egg is announced, travel to the named zone only if your speed can handle the crowd. Large eggs tend to have better quality, but racing for one can cost more than taking a safe nearby egg.

Daytime egg run before the night reset

Hatching, Pets, and Home Upgrades

Place stolen eggs at home and wait for their individual hatch timers. Opening is manual, so check back after the timer ends.

Stolen egg incubating at the home base

Use the one-tap option to equip your strongest pets. They earn money even while you are offline.

Best pets equipped for offline income

Upgrade the home to raise the pet limit and improve steady income.

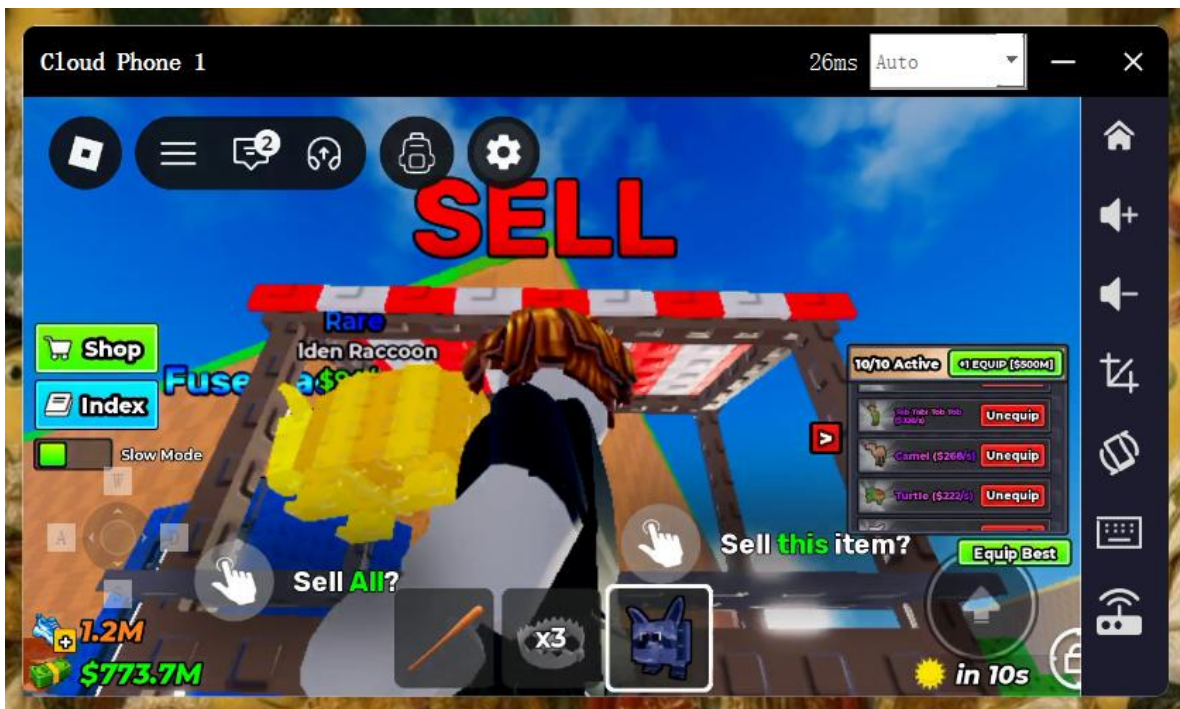

Home upgrade increasing the pet limit

The pet guide lists creatures by zone. Completing collections grants money and speed rewards.

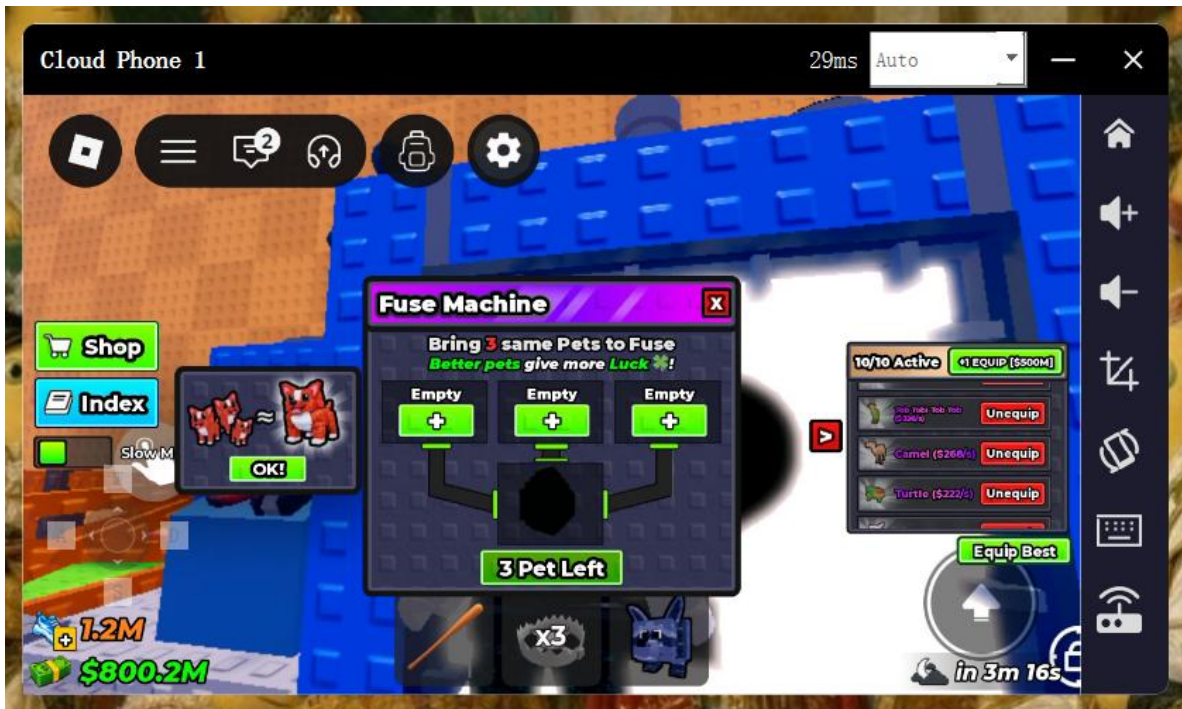

Pet guide with collection rewards

Sell unwanted pets for cash.

Selling an unwanted duplicate pet

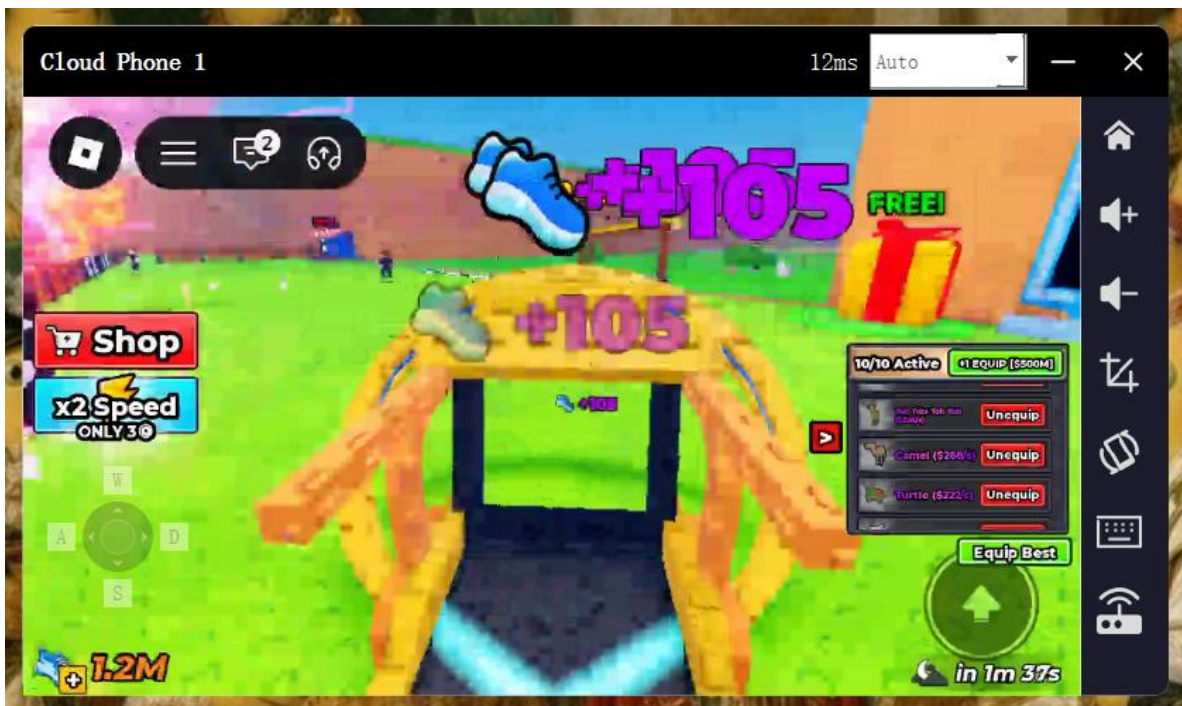

Three matching pets can be combined into a higher tier.

Combining three matching pets

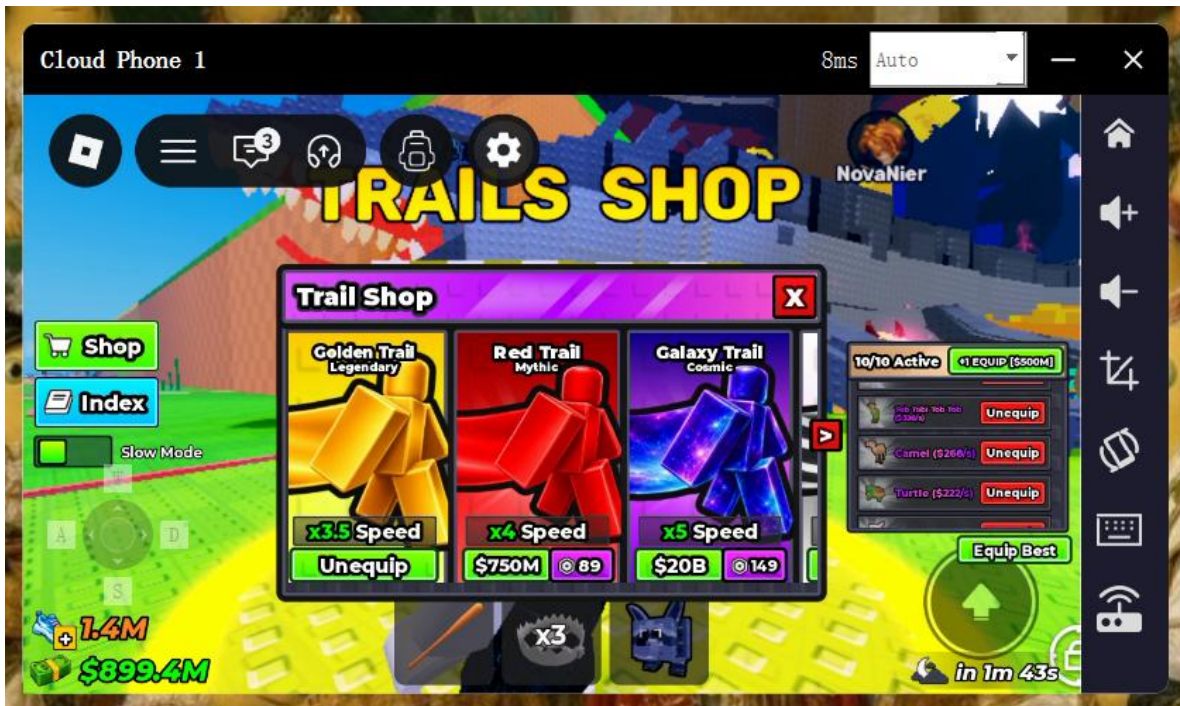

Speed Training and AFK Setup

The treadmill is the most reliable AFK target because it directly increases speed. Keep the character running and confirm that the stat rises before leaving the session.

Character training speed on a treadmill

A speed multiplier from the trail shop improves each training tick.

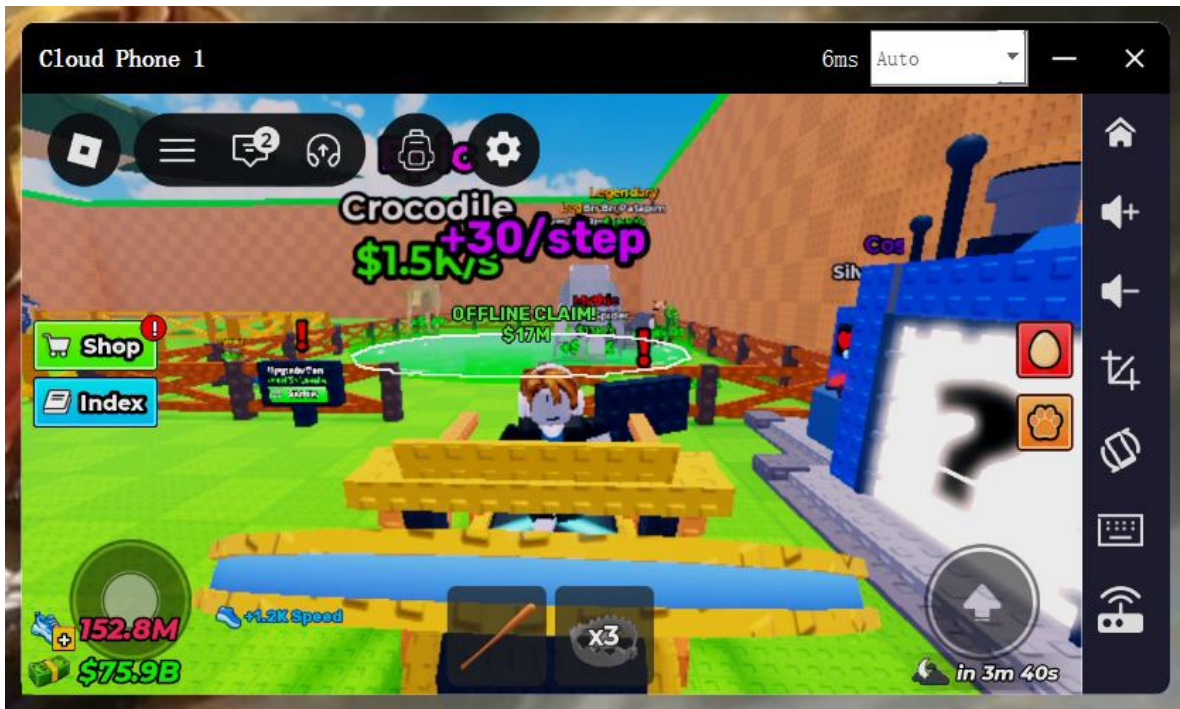

Speed multiplier in the trail shop

Macros and auto-clickers are a poor fit for stealing: egg quality is random, returning requires camera control and a held run input, and night interrupts the route.

How UgPhone Helps

Create a cloud device, install Roblox, open the game, and place the character on the treadmill. Test for several minutes, confirm speed gains, then extend the session. UgPhone reduces phone heat and keeps training separate from your daily device; it does not guarantee rare eggs or replace route decisions.

UgPhone cloud session running treadmill training

Conclusion

Build speed, and use each zone marker as a checkpoint. Open finished eggs, equip the strongest pets, sell weak extras, and combine matching duplicates so the base keeps producing useful income. For AFK progress, test the treadmill for several minutes and confirm that the speed number is still rising. If you want to continue that permitted training without keeping your phone occupied and warm, ****download UgPhone and start a free trial****, then extend the session after the short test remains stable.
